KinderPath Pro:
A Guide for Early Learning Programs

2026-2027

KinderPath

What is KinderPath Pro?

KinderPath Pro is an early childhood instructional platform built around a simple idea: assessment information should lead directly to teaching. Instead of treating readiness data, skill proficiency, student notes, grouping, and lessons as separate tasks, KinderPath Pro connects them into one instructional cycle.

128 skills across 12 domains,

aligned to Georgia's GELDS, with over 300 teacher-led classroom lessons

KinderPath

One Instructional Home

School Readiness Assessment

Capture a broad view of student readiness and maintain a chronological assessment history.

Quick Skill Checks

Select a specific skill, record performance, and use the result as part of the student's current proficiency picture.

Smart Groups

Get suggested skill-based groups from proficiency information. Teachers decide who learns together.

Teacher Notes & Evidence

Document instructional observations and, where appropriate, attach photos, files, or audio evidence.

Student Instructional Profiles

See skill proficiency, domain-level progress, assessment history, and small group information in one student-centered location.

Lesson Library

Move from an identified skill directly into teacher-created lessons tied to the skill being taught.

KinderPath

Designed to make assessment instructional

Assessment shouldn't end with a score. KinderPath Pro tracks each child's skills as Emerging, Developing, or Proficient across twelve early learning domains, so teachers can see the whole child and decide what to teach next. Every skill is mapped to Georgia's Early Learning and Development Standards (GELDS).

- Literacy
- Early Writing
- Mathematics
- Fine Motor
- Gross Motor
- Language & Communication
- Social-Emotional
- Executive Function
- Independence
- Science
- Social Studies
- Creative Arts

KinderPath

From skill need to purposeful teaching

KinderPath Pro shortens the distance between identifying a need and acting on it. Teachers can work from a student's profile or a skill-focused group toward instruction for that same skill.

Three-part lesson structure

Intro	Practice	Apply
Introduce the skill with clear teacher guidance and an explicit learning objective.	Give children supported opportunities to work with the skill.	Provide an opportunity to use the skill with greater independence or in a new context.

KinderPath

Grouping Options

Small Groups: KinderPath Pro suggests groups of students who need the same skill. Teachers decide who learns together.

Manual Groups: Build a group by hand around any skill, with the students you choose.

Teach This Skill: Go straight from a group to the guided lesson for its focus skill.

Group Observations: Record what you saw during the lesson, and each child's progress updates.

Turning student data into useful information

Progress Report

View a student's development across domains and skills, including current proficiency levels, assessment history, and progress over time.

Classroom Report

See classroom-level performance to identify shared strengths, developing skills, and areas where additional instruction may be needed.

Domain & Skill Report

Dig deeper than overall readiness by viewing performance across specific domains and individual skills—helping educators identify exactly where students are succeeding or need additional support.

Assessment Reports

Review results from School Readiness Assessments, Quick Skill Checks, and instructional observations with clear source and date information.

Group & Instructional Insights

Use proficiency data to identify students with similar instructional needs and support purposeful small-group planning.

School-Level Insights

Give school administrators a broader view of student progress across classrooms to help identify trends, instructional priorities, and areas for program support.

KinderPath

Built from the classroom

KinderPath Pro was designed by a certified Pre-K educator around a simple belief: the information we gather about children should make it easier to know what to teach next.

It helps educators spend less time piecing information together and more time doing what matters most: teaching, supporting, and helping every child grow.

Every skill, lesson, and assessment in KinderPath Pro reflects how Pre-K classrooms actually work.

KinderPath

Student Data and Privacy

How we protect student information

Young children's records call for care. Here's how KinderPath Pro handles them:

- **Your school's records stay your school's.** KinderPath does not claim ownership of student records and uses them only to provide the service to your school.
- **Never sold, never used for advertising.** Student information is never sold, used for advertising, or used to train AI models.
- **Photos and audio stay private.** Evidence files are stored privately and can't be opened without signing in. Photographs and audio are never sent to AI.
- **Stored in the United States.** Student data is stored in the United States.
- **Your data, whenever you need it.** A school can export all of its data at any time, and deletion requests are reviewed and logged.

Plans and Rates

Plan	Students	Rate
Pro 15	Up to 15	$1,190/year
Pro 60	Up to 60	$2,990/year
Pro 120	Up to 120	$4,990/year
Pro 250	Up to 250	$7,990/year

Monthly billing is also available. Annual billing includes two months free.

Plans for every program size

Plans are based on the number of active students. Every school starts with a free 14-day trial, no card required. The free trial covers up to 60 students.

Every plan includes

- 128 skills across 12 domains, aligned to Georgia's GELDS
- Over 300 teacher-led classroom lessons
- The School Readiness Assessment
- Progress reports, portfolios, and AI-drafted narratives
- Unlimited teachers and classrooms

Multi-site or district program? Email schools@mykinderpath.com.
